

Dry ice containers

Technical specifications

The strong and hygienic CIC series combines the quality and hygiene of the monobloc structure in polyethylene with the use of metal components realised exclusively in stainless steel.

The containers are made with an isolation technique that assures a perfect attachment of the isolation with the inner and outer walls of the container. Even in contact with low temperatures of dry ice the walls will not deform.

hygienic silicone seal, easy to disassemble and reassemble, permits easy cleaning

lid opening assisted by gas springs, safe for operators, prevents accidental closing of the lid.

hinges, lock and gas pistons are rust proof and mounted in a protected position

depth of the container at the inside is not too high, allowing every user to empty the dry ice from the bottom without problems

level (flat) bottom surface to shovel the ice out of the container easily

accessible from four sides by pallet truck and fork lift

stackable: the lid is equipped with seats for that permit steady stacking of containers

all mechanical parts are screwed onto large threaded inserts built onto plates set in the shell of the product

a drain hole in the bottom to flow water of condensation and to ease cleaning
